

# Getting Started in Qlik Sense

## *Exercise File Instructions*

This Getting Started in Qlik Sense course includes exercise files. There are two file types available:

1. .qvf files – these are the Qlik Sense files that contain the data needed for the exercises
2. .csv files – these are the raw data files that you can import into Qlik Sense

It's up to you which you use to complete the exercises.

**PLEASE NOTE:** We use the same datasets for the videos in the Getting Started in Qlik Sense course. So if you wish to follow along with the lessons, you will need these files as well.
